

Signs of Green

Green Facts & Specification Tips

FullView[®]

FullView is a low-profile, modular sign system suitable for all interior sign types. Although sign products may not have a significant impact upon a facility's LEED[®] accreditation goals, certain FullView system materials and features may help contribute toward LEED points or at the very least provide smart, environmentally friendly sign solutions in the true spirit of the LEED rating system.

A Photopolymer ADA Plaque with Tactile/Braille

- PETG bonded to 1/32" photopolymer
- Photopolymer processing is water-based, with 100% biodegradable effluent

Green Tips & Options

Specify a clear finish (unpainted) ADA plaque and use subsurface laser printed paper or eco-solvent inkjet printed paper for background color. Specify clear (non-screen printed) raised copy and Braille and use a separate, non-tactile element of the sign for the visual message.

B Modular Aluminum Sign Frame

- 50% post-consumer recycled content extruded aluminum edge profiles
- 100% made in the USA
- Fully modular insert components updatable to extend sign's life cycle

Green Tips & Options

Specify a satin or bronze anodized frame finish. (Very durable with no VOCs as associated with many paint finishes.) Standard frame "core" is DiBond[®] aluminum composite. Specify FullView GR Series for a more eco-friendly option. GR Series frames feature a **SiennaCore**[™] structure, a natural fiber composite with 50% recycled content. Specify mechanical fasteners for installation. (No VOC's as associated with most vinyl tapes and other mounting adhesives.)

C Updatable Sign Inserts

- Removable non-glare acrylic lens with 25% pre-consumer recycled content
- SignWord paper is FSC (Forest Stewardship Council) certified as supplied by Mohawk Industries, Inc. and is 100% recyclable

Green Tips & Options

Specify APCO SignWord laser printed paper for graphics. Paper is 100% recyclable and can be updated easily in house thus avoiding shipments from the manufacturer. Graphics, especially for larger signs, are also available as large-format ink-jet prints. APCO's eco-solvent digitally printed graphics provide a high-quality, durable solution with much reduced VOCs vs. stronger solvent-based inks.

D Elements 2 Optional Decorative Backers

APCO's Elements 2 range of decorative shapes and finishes is compatible with the FullView system and offers laminates bonded to **SiennaCore**[™], a natural fiber composite with 50% recycled content and comprised of materials from FSC certified sources.

**SIENNA
CORE**[™]
NATURAL FIBER COMPOSITE
