InfoLock™

PATIENT INFORMATION SYSTEM

With hospital liability and patients' health on the line, patient information signage must clearly communicate with no ambiguity, and it must do so in a secure manner, ensuring that only designated hospital personnel are controlling the messages. APCO's InfoLock system delivers these essential features and a host of other unique benefits.

InfoLock™ System Overview

1 Modular Display Options
InfoLock's design flexibility is one of its greatest attributes, as the display options are virtually limitless
- Updatable Posters
- ADA-Compliant Room Identification
- Contact Precaution Displays
- Decorative Finishes
- Custom Imagery / Photographs
- In-Use Sliders
- Aluminum Divider Bars

2 ADA-Compliance
Modular, ADA-compliant inserts with grade-2 Braille and raised characters feature APCO's zero-waste, DP-Tactile printing process. DP-Tactile presents a durable ADA-solution while also offering virtually limitless colors and finishes.

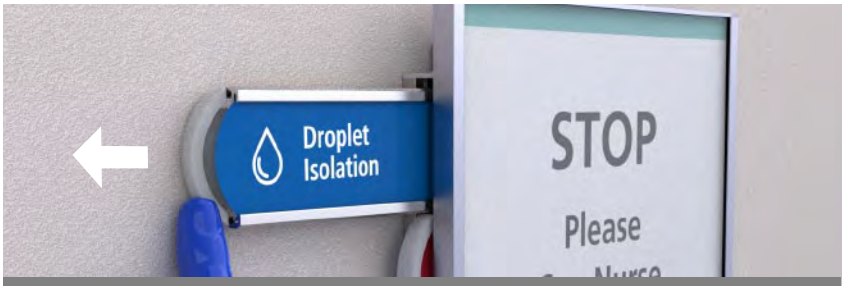
3 Three Modular System Options
The InfoLock system of locking, pull-out tabs is compatible with APCO's three primary interior signage lines, each with a distinct look
- FullView® **Framed / Low-Profile**
- Arcadia® **Framed / Curved**
- Elevate® **Frameless**

These three systems offer comprehensive wayfinding solutions for healthcare facilities, so you can be assured of design consistency from the patient information signs throughout the entire signage program.

4 Locking Message Tabs
2-1/2"w or 4-1/2"w locking bands are precisely engineered to slide on an extruded aluminum track concealed behind the sign. The aluminum bands accommodate changeable & customizable message tabs. 4-1/2"w bands enable both text and symbols to be displayed, thus making communication clear and concise.

5 Concealed Release Button
When not in use, patient messages remain fully concealed and locked behind the sign. By pressing the Release Button, bands may then be slid and engaged into a visible and secure position. This feature not only provides tamper-resistance, but also requires an extra level of thought be put forth by medical staff before any message is displayed.

5 Concealed Release Button

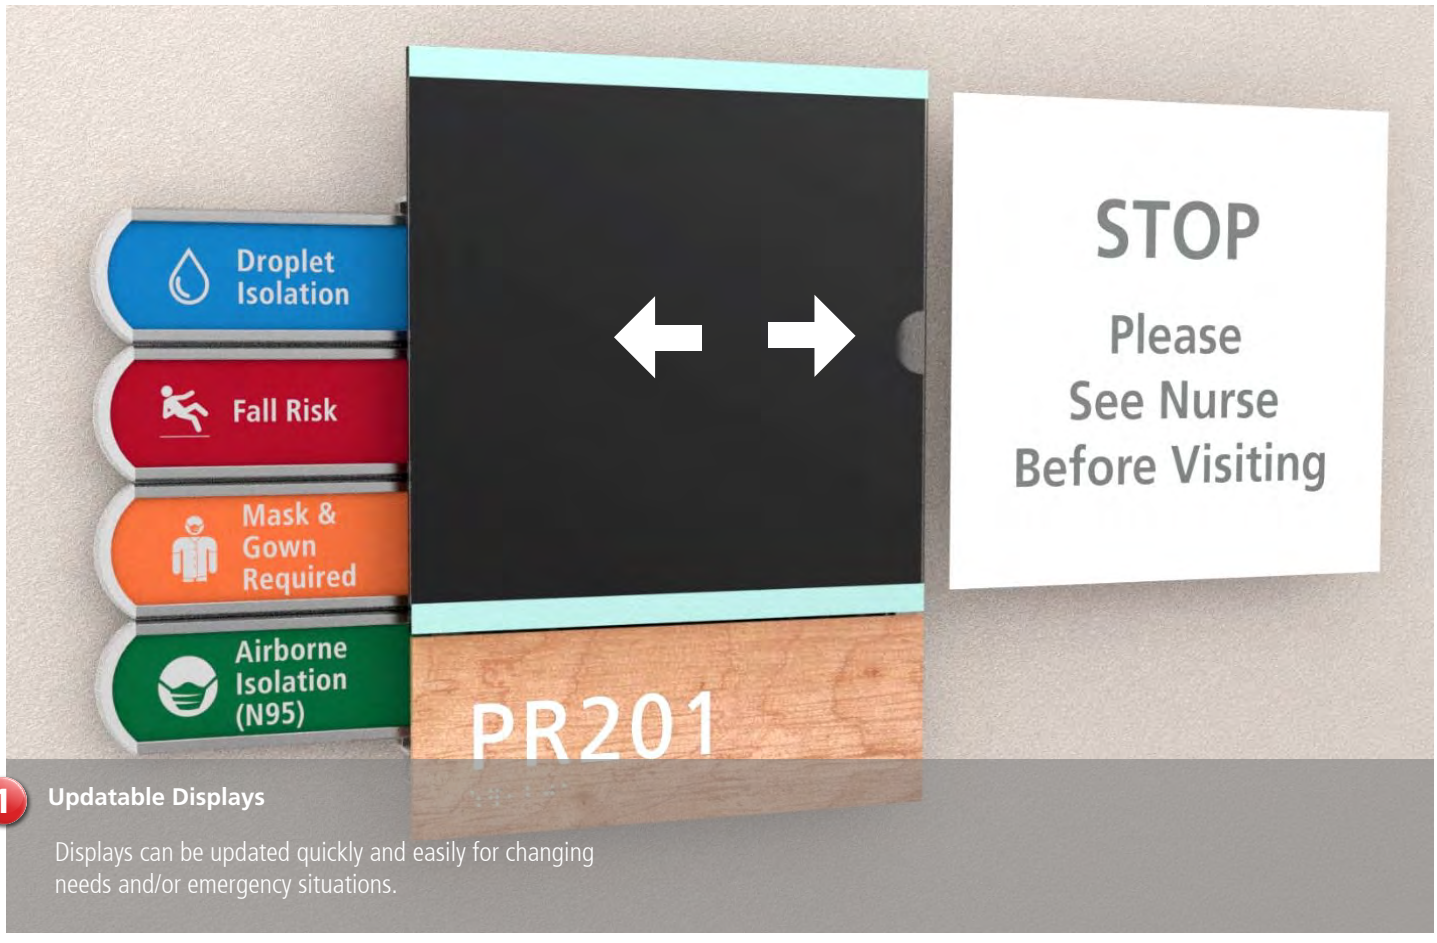


4 Message Tab Insert Removal
Message Tab Inserts are easily removed and replaced by pressing on the molded plastic tips and sliding the inserts in and out.

3 **Three Modular System Options**

The InfoLock assembly functions with APCO's low-profile FullView system, curved-face Arcadia system, or frameless Elevate system.

All three systems offer comprehensive wayfinding solutions for healthcare environments so you can be assured of design consistency throughout your entire sign program.



1 **Updatable Displays**

Displays can be updated quickly and easily for changing needs and/or emergency situations.

InfoLock™ with **Elevate**® Frameless Sign System
