Door Profile Options

All shapes available in aluminum. Brass available in SD & RD only.

Gas Cylinder "Assists"

"GC" Cabinets are specifically designed for heavy, top hinged doors.

Door Operating Clearance

A 1" wide Reveal (tube) is attached to the cabinet to provide proper door operating clearance. A decorative, non-structural angle trim is then attached to the tube.

IMPORTANT :
See "Installation / Mounting Details" page to determine Cavity Dimensions.

Custom Components

Complete Specifications Provided

Note 1

Wall cavity size is determined by adding cabinet housing, surrounding reveal, trim and installation clearance. Trim styles and cavity opening calculations are illustrated on "Installation / Mounting Details" page.

Note 2

Display area is calculated by subtracting 3-3/8" from both the cabinet housing's height and width.

Height _____ - 3-3/8" = _____ Width _____ - 3-3/8" = _____
(Display Area) *(Display Area)*

Note 3

Clear glass has a natural slight green tint. Though typically unnoticeable, it may affect the appearance of certain colors. Composite glazing (i.e. Acrylic, Lexan, etc.) is not used. These materials are not as strong as tempered glass, they are more vulnerable to scratches and expansion enhances imperfections in their natural uneven and wavy surfaces.

Note 4

All display components are available for interior use. Refer to Product Technical Manual for those components approved for exterior applications.

Installation / Mounting Details

Section : Plan View

IMPORTANT :

APCO IS NOT RESPONSIBLE FOR CAVITY CONSTRUCTION WHICH VARIES FROM SPECIFICATIONS SHOWN ON THIS PAGE. Wall cavity opening must be precisely constructed in terms of size, squareness and depth. Size calculations and cavity opening tolerances are shown below.

Elevation : Front View

Section : Side View

Wall Cavity Size : Standard

Continuous Angle

The Continuous Angle is recommended to conceal rough cut openings while allowing for inconsistencies in cavity size. It also helps to avoid obstruction of the reveal area which is required for proper door operation. To determine cavity opening, add 2-3/4" to both the cabinet's height and width.

$$\boxed{\text{Cabinet Height}} + 2\text{-}3/4" = \boxed{\text{Cavity Height}}$$

$$\boxed{\text{Cabinet Width}} + 2\text{-}3/4" = \boxed{\text{Cavity Width}}$$

These calculations include a 1" Reveal, 1/8" thick Continuous Angle and 1/2" total installation clearance.

Overall cavity tolerance is +/- 1/8".

Wall Cavity Size : Optional

"Flat Bar" Trim

A 1/8" wide "Flat Bar" can be substituted when the 1" wide Continuous Angle is not desired. To determine cavity opening, add 2-3/8" to both the cabinet's height and width.

$$\boxed{\text{Cabinet Height}} + 2\text{-}3/8" = \boxed{\text{Cavity Height}}$$

$$\boxed{\text{Cabinet Width}} + 2\text{-}3/8" = \boxed{\text{Cavity Width}}$$

These calculations include a 1" Reveal, 1/8" thick Flat Bar and 1/8" total installation clearance.

Overall cavity tolerance is +1/8", minus 0".

Wall Cavity Size : Optional

Angle / Trim Omitted

When cavity space is a factor, the surrounding trim can be eliminated to obtain the largest directory/cavity combination. The 1" reveal remains to maintain proper door operation. To determine cavity opening, add 2-1/8" to both the cabinet's height and width.

$$\boxed{\text{Cabinet Height}} + 2\text{-}1/8" = \boxed{\text{Cavity Height}}$$

$$\boxed{\text{Cabinet Width}} + 2\text{-}1/8" = \boxed{\text{Cavity Width}}$$

These calculations include a 1" Reveal and 1/8" total installation clearance.

Overall cavity tolerance is +1/8", minus 0".
