Ceiling Signs

Clear Lens Retention Clip

Clips are compatible with FullView Standard Assembly or E-Series double sided ceiling signs.

Perferably attach Lens Retention Clips prior to installing the sign, but clips can be retrofitted on existing signs if necessary. The clips should be attached to the middle (approximately) of the two vertical edges of the assembly. Regardless of the size of the sign, APCO recommends using these Retention Clips for all overhead ceiling signs.

- 1.** Refer to enlarged detail of the Lens Retention Clip in Fig 1.
Angle the clip so as to catch one side of the vertical rail, and then rotate to the other side, flexing and snapping securely into place.
- 2.** Adjust the location of the clips if necessary, by holding and sliding, so they are approximately in the middle of each side of the sign.
- 3.** Remove clip with finger nail by peeling one side outward, then rotating. See Fig. 2 (Note: If the clip is tight, you may use a drivers lincense, credit card or similar to help peel the clip outward, away from the frame).
